Docking Updates

Legislative Budget Committee
Prepared by: Office of Facilities Management
August 22, 2023
This is demolition of the 12th floor core area. At the bottom of the picture, steel beams are cut and ready for removal by crane. The right photo shows a view of working level of demolition process, as well as the demo machines breaking concrete floors.
Here is a view from the remote camera. The 11th floor is now removed and work is shifting to 10th floor and a small portion of 9th floor at the north end of the building.
The demo machines are breaking what’s left of the 10th floor. This is called “breaking yourself into a corner.” This is the last 200sf of concrete on this level.
The new CMU walls are complete at the Basement level. This is an area where glazed block was infilled in an old door opening. The mason still needs to color match the mortar, but the block looks seamless.
Fabricated steel protection will be installed around the current boiler flues for protection during heating season and the adjacent demolition activity. These are about 16ft tall. The storm sewer had to be redesigned to avoid all of the utilities and there is no room to spare.
