Topeka, KS 66603

## Re: Cost Projections under HB 2194, House Sub SB 259, and Senate Sub HB 2333

Dear Alan:

As you requested, we have prepared exhibits to compare the estimated employer costs under three proposed plan designs:
(1) HB 2194,
(2) House Sub SB 259 (as recommended by the House Committee on Pensions and Benefits) and
(3) Senate Sub HB 2333 (the Morris/Kelly Cash Balance Plan).

HB 2194 is a traditional final average pay defined benefit plan. Both House Sub SB 259 and Senate Sub HB 2333 are cash balance plans (defined benefit plan) funded by both employer and employee contributions. Comprehensive cost studies have previously been performed for each of these proposed plan designs. Therefore, the cost estimates shown in the attached exhibits are the same as those provided in our prior cost study letters. The cost study letter for House Sub SB 259, which also includes costs for HB 2194, is dated March 20, 2012 and the cost study letter for Senate Sub HB 2333 (Morris/Kelly Cash Balance Plan) is dated March 23, 2012. These letters contain important information about the cost projections including a description of the plan provisions for the proposed plan design, the actuarial assumptions and methods used in preparing the cost projections, and caveats and limitations regarding the modeling results. The exhibits attached to this letter should only be viewed and relied upon after a full review of the prior cost study letters prepared for each plan design.

## Statutory Contribution Cap

In KPERS, the employers do not necessarily contribute the full actuarial contribution rate. Based on legislation passed in 1993, the employer contribution rates certified by the Board may not increase by more than the statutory cap. The current statutory cap, which has been changed periodically, is $0.60 \%$ for the State, School and Local groups. Senate Substitute for HB 2194 increased the statutory cap over a four year period beginning with $0.9 \%$ in FY 2014 to an ultimate cap of $1.2 \%$ in FY 2017. The increases in the statutory cap on the employer contribution rate contained in Senate Substitute for HB 2194 are also included in House Sub SB 259 and Senate Sub HB 2333.

## Senate Substitute for HB 2194

The cost projections for HB 2194 shown in this study are based on the default elections provided under Senate Substitute for HB 2194 as passed by the 2011 Legislature. The projections for Senate Sub HB 2333 also reflect the default benefit provision changes for KPERS Tier 1 and 2 members included in Senate Substitute for HB 2194. However, the projections for House Sub SB 259 reflect an increase in the benefit multiplier from $1.75 \%$ to $1.85 \%$ for both Tier 1 and 2 members. In addition, the member contribution rate for Tier 1 is increased from $4 \%$ to $6 \%$ and the cost of living adjustment for Tier 2 is eliminated.

## Actuarial Assumptions and Methods

In general, the same actuarial methods and assumptions that were used in the December 31, 2010 actuarial valuation were used in the cost projections unless otherwise noted. Please refer to the cost study letter prepared for each plan design for a full description of all of the actuarial assumptions and methods, including those unique to that plan design, that were used in preparing the cost projections.

All three of the plan designs are defined benefit plans. Our modeling assumes that the new tier will be combined with the existing KPERS Tiers 1 and 2 in one system with one trust. However, separate employer contribution rates will continue to be determined for the State/School group and the Local group. The actuarial valuation will reflect the future benefit payments for Tier 3 members along with those for Tier 1 and 2 members and one overall employer contribution rate will be developed for each group, which includes the UAL payment, to be paid on all covered payroll (Tier 1, Tier 2 and Tier 3 members). From an actuarial perspective, the valuation process is unchanged other than reflecting the new benefit structure for Tier 3 members.

## Results

The cost impact of the various proposed plan designs will unfold over time as current Tier 1 and Tier 2 members leave covered employment and are replaced by Tier 3 members. Therefore, a projection of employer costs over a long period of time is necessary in order to see the long term impact of the proposed plan design. The employer cost estimates under HB 2194, House Sub SB 259, and Senate Sub HB 2333 are reflected in the attached exhibits. Exhibits A1 and A2 show the expected employer contribution rate under each plan design by year for the State/School and Local groups and Exhibits B1 and B2 show the estimated dollar amount of employer contributions in each future year. The projections assume that all actuarial assumptions, including the $8 \%$ investment return assumption, are met in the future. Please note that the dollar amounts of employer contributions shown are future dollar amounts, calculated using the estimated employer contribution rate and projected payroll in future years. Due to the length of the projection period, the future payroll amounts grow significantly and the resulting contributions in nominal dollars in those years can appear very large. In order to provide a method for more direct comparison of results, the present value of the total employer contributions at $8 \%$ has been included at the bottom of Exhibits B1 and B2. The employer contribution rate also provides a reliable way to compare the cost of various plan designs in the future. Exhibits C1 and C2 show the split of projected employer contributions into normal cost and UAL payments by year and in total for House Sub 259 and Senate Sub HB 2333.

The cost projections attached to this letter are based on one set of actuarial assumptions, which include an $8 \%$ assumed rate of investment return. The cost projections for the various plan designs are sensitive to the assumptions used, particularly the investment return assumption. However, the impact of different assumptions varies for each of the three plan designs. Further analysis can be provided upon request if it is deemed to be necessary or helpful.

It should also be noted that the different plan designs studied in this cost comparison do not provide the same amount of retirement benefits. This has an impact on the cost of the plan designs. Therefore, the cost projections should not be evaluated in isolation from the benefit amounts provided by each plan design.

## Disclaimers, Caveats, and Limitations

The numerical charts that comprise this study are based primarily upon the December 31, 2010 valuation results, the actuarial assumptions used in the valuation (other than as noted in the cost study letters for each plan design), and the projection model prepared by the System's actuary, Cavanaugh Macdonald Consulting, LLC. Significant items are noted below:

- Investment return in all future years is assumed to be $8 \%$ on a market value basis, unless otherwise indicated.
- All demographic assumptions regarding mortality, disability, retirement, salary increases, and termination of employment are assumed to hold true in the future. Please note that the actuarial assumption assumes that mortality will improve in the future (i.e. people will live longer).
- Changes in the plan design and resulting benefit amounts may have an effect on future termination and retirement patterns. Whether, and how, retirement and termination of employment patterns will ultimately be impacted cannot be known at this time. Therefore, no change in the assumptions was reflected in our modeling results.
- The number of active members covered by KPERS in the future is assumed to remain level (neither growth nor decline in the active membership count). As active members leave employment, they are assumed to be replaced by new employees who have a similar demographic profile as recent new hires.
- Plan provisions for Tiers 1 and 2 are modified as disclosed earlier in this letter. Tier 3 benefits are as provided under HB 2194, House Sub SB 259, and Senate Sub HB 2333 as described in the cost study letters previously prepared by Cavanaugh Macdonald Consulting, LLC on March 20, 2012 and March 23, 2012. There are no other benefit changes reflected in future years.
- The funding methods including the entry age normal cost method, the asset smoothing method, and the amortization method and period remain unchanged other than as noted elsewhere in this letter or the cost study previously prepared for House Sub SB 259 and Senate Sub HB 2333.
- The projections reflect the statutory caps for the State/School and Local employers under Senate Substitute for HB 2194 for all three plan designs.
- We relied upon the membership data provided by KPERS for the actuarial valuation. The numerical results depend on the integrity of this information. If there are material inaccuracies in this data, the results presented herein may be different and the projections may need to be revised.

Models are designed to identify anticipated trends and to compare various scenarios rather than predicting some future state of events. The projections are based on the System's estimated financial status on December 31, 2010, and project future events using one set of assumptions out of a range of many possibilities. A different set of assumptions would lead to different results. The projections do not predict the System's financial condition or its ability to pay benefits in the future and do not provide any guarantee of future financial soundness of the System. Over time, a defined benefit plan's total cost will depend on a number of factors, including the amount of benefits paid, the number of people paid benefits, the duration of the benefit payments, plan expenses, and the amount of earnings on assets invested to pay benefits. These amounts and other variables are uncertain and unknowable at the time the projections were made. Because not all of the assumptions will unfold exactly as expected, actual results will differ from the projections. To the extent that actual experience deviates significantly from the assumptions, results could be significantly better or significantly worse than indicated in this study.

We, Patrice A. Beckham, FSA and Brent A. Banister, FSA, are consulting actuaries with Cavanaugh Macdonald Consulting, LLC. We are members of the American Academy of Actuaries, Fellows of the Society of Actuaries, and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

If you have any questions or additional information is needed, please let us know. We are available to provide additional analysis or explanation.

Sincerely,

## Paticic Becker

Patrice A. Beckham, FSA, EA, FCA, MAAA Principal and Consulting Actuary

Brent A. Banister, PhD, FSA, EA, FCA, MAAA Chief Pension Actuary
