

KANSAS INFORMATION TECHNOLOGY PROJECT MANAGER

Kansas Classification Description

Responsible for planning and ensuring that projects are successfully completed on time and within budget. Work involves assessing the project characteristics, determining how to ensure the information technology project management methodology is followed, identifying the project management processes required, defining the problem, conducting a needs analysis and developing an initial concept around potential solutions. Responsibility also includes clearly defining milestones, deliverables, requirements, constraints and project success criteria. Risk management, quality assurance, and change and configuration management activities are included as project management processes. Analytical thought becomes more important at this level due to increased data and changing situations, costs due to errors may be significant, communication skills become an important requirement at this level. May supervise other staff on a project basis.

Kansas Classified Position Minimum Qualifications

- Bachelor's degree + three years project management experience , or
- Five years project management experience

NECESSARY SPECIAL REQUIREMENTS: Must possess a Kansas IT Project Management Methodology Certification or a traditional IT Project Management Methodology Certification or obtain certification within one year of employment.

Kansas IT Project Management Methodology Certification

For certification as a Kansas IT Project Manager, the participant must complete the three week Kansas Project Management Methodology course and successfully pass a final examination.
