(1) Determine the total expenditures of the district during the preceding school year from all funds for transporting pupils of public and nonpublic schools on regular school routes;

(2) divide the amount determined under (1) by the total number of pupils who were included in the enrollment of the district in the preceding school year and for whom transportation was made available by the district;

(3) multiply the quotient obtained under (2) by the total number of pupils who were included in the enrollment of the district in the preceding school year, were residing less than 2 1/2 miles by the usually traveled road from the school building they attended, and for whom transportation was made available by the district;

(4) multiply the product obtained under (3) by 50%;

(5) subtract the product obtained under (4) from the amount determined under (1);

(6) divide the remainder obtained under (5) by the total number of pupils who were included in the enrollment of the district in the preceding school year, were residing 2 1/2 miles or more by the usually traveled road from the school building they attended and for whom transportation was made available by the district. The quotient is the per-pupil cost of transportation;

(2) determine the sum of: (A) The number of pupils who were included in the enrollment of the district in the preceding school year who
resided less than 2.5 miles by the usually traveled road from the school building such pupils attended and for whom transportation was made available by the district; and (B) the number of nonresident pupils who were included in the enrollment of the district for the preceding school year and for whom transportation was made available by the district;

(3) determine the number of pupils who were included in the enrollment of the district in the preceding school year who resided 2.5 miles or more by the usually traveled road from the school building such pupils attended and for whom transportation was made available by the district;

(4) multiply the number of pupils determined under paragraph (3) by two;

(5) divide the amount determined under paragraph (2) by the product obtained under paragraph (4);

(6) add one to the quotient obtained under paragraph (5);

(7) multiply the sum obtained under paragraph (6) by the amount determined under paragraph (3);

(8) divide the amount determined under paragraph (1) by the product obtained under paragraph (7). The resulting quotient is the per-pupil cost of transportation;

(9) on a density-cost graph plot the per-pupil cost of transportation for each district;

(10) construct a curve of best fit for the points so plotted;

(11) locate the index of density for the district on the base line of the density-cost graph and from the point on the curve of best fit directly above this point of index of density follow a line parallel to the base line to the point of intersection with the vertical line, which point is the formula per-pupil cost of transportation of the district;

(12) divide the formula per-pupil cost of transportation of the district by base state aid per pupil; and

(13) multiply the quotient obtained under paragraph (12) by the number of pupils who are included in the enrollment of the district, are residing 2 1/2 2.5 miles or more by the usually traveled road to the school building they attend, and for whom transportation is being made available by, and at the expense of, the district. The product is the transportation weighting of the district.

(c) "Index of density" means the number of pupils who are included in the enrollment of a district in the current school year, are residing 2 1/2-

(d) "Density-cost graph" means a drawing having: (1) A horizontal or base line divided into equal intervals of density, beginning with zero on the left; and (2) a scale for per-pupil cost of transportation to be shown on a line perpendicular to the base line at the left end thereof, such scale to begin with zero dollars at the base line ascending by equal per-pupil cost intervals.

(e) "Curve of best fit" means the curve on a density-cost graph drawn so the sum of the distances squared from such line to each of the points plotted on the graph is the least possible.

(f) The provisions of this section shall take effect and be in force from and after July 1, 1992.

Sec. 14. K.S.A. 2013 Supp. 72-6414 is hereby amended to read as follows: 72-6414. The product is the at-risk pupil weighting of the district.

(b) Except as provided in subsection (d), of the amount a district receives from the at-risk pupil weighting, an amount produced by a pupil weighting of .01 shall be used by the district for achieving mastery of basic reading skills by completion of the third grade in accordance with standards and outcomes of mastery identified by the state board under K.S.A. 72-7534, and amendments thereto.
